

### Buttons Functions

	(-)Zoom OUT - Change the scale to show less details of a larger area. (+)Zoom IN - Change the scale to show more details of a smaller area.
	<b>CURSOR BUTTON</b> Moves the Pointer on the Chart screen and very quickly pans/slides the charts location. Also, scrolls the selected option in the menu page(s).
	Displays a Menu of available options from each of the pages.
	Selects the highlighted menu option or other item on the screen.
	Selects the Goto function.

	Immediately search for Ports, Port Services, Tide Stations, Wrecks, Obstructions, Etc.
	Cycle through the available pages in sequence.
	Exits from Menus and acts as a Back button. Continuously pressing will show the boat on the chart.
	Switches power ON or OFF. A quick press allows adjusting of backlighting and other settings.
	Activates the MOB (Man OverBoard) position in emergency situations.
	Software Buttons have different functions according to the modes of operation. Their labels for the current function are shown on the screen right above the buttons.

### Start-Up Sequence

**WARNING**  
Electronic charts (ECs) are geographical data - not official government charts. They are believed to be accurate, but are neither verified nor guaranteed. Hydrographic Authorities are designed only to ease navigation calculations and are not to be relied upon as a primary source of navigation information. They are a backup to official government charts and should not be used to change your navigation habits. The navigator shall maintain a direct relationship with the official color of water areas and depths. The navigator shall use the official charts and use the official information.
